HISTORY

The 4,043-acre Williams AFB was a flight training school until it closed in 1993. Since then, the Air Force has continued to clean up soil and groundwater from past military operations. The last remaining sites requiring cleanup include the Steam Enhanced Extraction site at the former fuel storage area. Like all other remedies, it was selected by the Air Force and EPA after public input and with concurrence of ADEQ and ADWR.

Property transfer is also nearly complete. The Air Force has deeded 3,900 acres from the military, with only 144 acres left to go. Williams is now home to the Phoenix-Mesa Gateway Airport, Arizona State University Polytechnic Campus, Gilbert Chandler Community College, and numerous other businesses.
